

Help Wanted: Safe, Knowledgeable Employees

Knowledgeable, well-trained people expand your company's capabilities, make your operation more efficient, and enhance your company's reputation. Not to mention the fact that well-trained workers avoid injury on the job and enable companies to meet OSHA mandates. TruPower Associates can help find the specific training that you need.

Motor Diagnostic Training

ALL-TEST Pro, LLC. offers introductory and advanced motor diagnostic training. Courses are taught onsite at your facility, so the courses are convenient, focus on the motors you use, and keep valuable employees close at hand.

The introductory course covers basic electric motor theory; types of motor faults; test/evaluation theory and application; evaluation of wound machines; motor diagnostics and energy software; trouble shooting to determine reliability and root cause; and incorporating motor diagnostics into an existing program. Advanced Motor Diagnostic Training covers electrical motor theory, motor maintenance, overview of motor testing methods, advanced MCA, FFT theory, and advanced ESA.

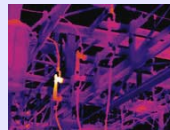

Electrical Training and Certification Programs

AVO Training Institute offers more than 50 courses in electrical maintenance and safety including courses like Arc-Flash Hazard Analysis Seminar, Battery Maintenance and Testing, Circuit Breaker Maintenance, Power Factor Testing, Power Quality & Harmonics, Protective Relay Maintenance, Substation Maintenance, and Transformer Testing and Maintenance. AVO Training Institute specializes in courses that keep your people safe like Electrical Safety for Industrial Facilities, NFPA 70E Electrical Safety Requirements, OSHA Electrical Safety-Related Work Practices, Electrical Safety for Operators, Electrical Safety - Low Voltage, and more. All are conducted onsite at your facility by qualified instructors. Training courses include classroom time and hands-on training utilizing your power distribution equipment.

If you just need to train just one or two people, AVO Training Institute offers numerous training courses at well-equipped training facilities across the United States. For open enrollment courses, go to www.electricaltrainingservices.com

Ensure that your employees are proficient and up-to-date with the latest training techniques and up-to-date standards and regulations in their specialized area. AVO Training Institute's certification programs include Certified Low-Voltage Circuit Breaker Technician, Certified Medium-Voltage Cable Technician, Certified Industrial Electrical Safety Inspector, Certified Protective Relay Maintenance Technician, Certified Substation Maintenance Technician, and Certified Fiber Optic Technician.

Infrared/Thermography Certification

Infrared training and certification are available for Level I, II, and III thermographers. For a new infrared camera user, Level I Infrared Thermography Training focuses on basic infrared techniques and predictive maintenance applications. At the successful conclusion of the program, the student will receive a Level I Infrared Thermography Certification. For practicing thermographers, Level II Infrared Thermographer Training provides advanced infrared training to strengthen thermography skills and Level II Thermographer Certification. Level III Infrared Thermography Training provides advanced infrared training for Level II thermographers including advanced techniques and skills to develop an infrared testing and inspection program, as well as, Level III Thermographer Certification. All three courses meet the requirements and standards of American Society for Non-Destructive Testing (ASNT).

Call us at (410) 242-2300 for more details or a proposal to meet your specific training requirements.
