

WOLFTape™

WATER-OIL-LEVEL-FLEXIBLE-tape

OIL
WATER

WOLFTape™ is a specially designed tape measure product to provide an instantaneous clear indication of the level of oil / dielectric fluid on top of water within an enclosed vault. Measurement or even detection of dielectric fluids floating on top of water within a vault is often difficult to determine in the field. An eighth of an inch of oil/dielectric fluid looks the same as a foot. A wide variety of techniques are employed by utility technicians to determine the presence and level of oil within an enclosed vault. A wrong "guesstimate" could lead to costly site remediation where none may be required or worse, not initiating the proper response where it is required! WOLFTape™ eliminates the guesswork.

It's easy to use and it's fast! WOLFtape™ is treated with a non-toxic dye that changes color from orange to yellow for a clear indication of the level of water. WOLFtape absorbs oil/ dielectric fluid without changing color giving a clear indication of depth. Precise marks every 1" and 6" allows you to make a quick decision about the fluid levels within the vault.

patent pending

P/N WTP-10/B: Box of 12 Packages. Each package contains one 10' length of WOLFtape™ w/ bottom weight.

P/N WTS-2/B: Box of 12 Packages. Each package containing ten 2' lengths of WOLFtape™.

When it comes to oil on water:
It's OK to Cry WOLFtape™!
